Bowling Butler™

Rechargeable Alphanumeric Pager

Two-Way Radio

Serve your customers faster and earn more profits with LRS Paging Systems and Radios

Customer Paging

There are several ways LRS customer pagers can improve service and increase your profits:

- *Waiting for Food* — After ordering food, customers can return to bowling or the arcade while they wait. When the food is ready, the pager lets them know instantly so they can get it fresh and hot.
- *Waiting for a Lane* — When lanes are busy, give customers a pager so they can play pool, visit the arcade, sit at the bar or eat something. They spend more money instead of sitting around waiting.
- *Waiting for a Lasertag* — Hand pagers to waiting team members so they'll know the moment their session is about to start. Since sessions start on time, you can run more of them every day — and earn more revenue.
- *Other Benefits* — LRS customer pagers eliminate the need for disruptive overhead paging. They also keep customers from crowding around the front desk and other areas while they wait.

Push-For-Service™ Paging

These simple-to-use, silent push-button systems improve service and increase sales by giving your customers the convenience of “on-demand” service.

Bowling Butler™: This tough, 100% waterproof unit lets customers page staff members from anywhere in your facility. They can order food or ask for assistance by simply sending a message to any employee wearing an LRS alphanumeric pager. It can also be used by employees to contact other staff members.

Table Genie™: For multiple messaging, this tiny three-button transmitter is what you need. Each button can be programmed to send specific messages to a monitor at the front desk or anywhere else when service is needed. It also works in single-button mode.

Butler II™: The low-cost, short-range paging solution. This slim, five-button unit attaches to almost any surface. Each button can be programmed to silently page a staff member or manager wearing an LRS alphanumeric pager.

NetPage PC Paging

Now you can send text messages silently and easily from any stand-alone or network computer to employees wearing an LRS Alphanumeric pager. Send detailed or pre-canned messages to one person or your entire staff. You can also use the system to page customers.

The Bulldog™ Pager-Alert System

The new Bulldog™ is the ideal way to stop people from walking off with your pagers. All you have to do is place this tiny unit over an exit doorway. If a staff member or customer walks through carrying a pager, the pager will start to vibrate or beep continuously until it's returned.

LRS Two-Way Radio

For reliable two-way communication, use our compact BR777 radio and low-profile headsets. Easy to carry and use, this durable, four-channel radio lets several employees talk to each other from anywhere in the building.
