

Send text messages to anyone in your building right from your PC

In today's competitive business world, finding your employees quickly when they're away from their desks is crucial, especially in larger buildings. Now it's easy to do with the NetPage PC Paging system.

NetPage lets you send detailed text messages instantly from any stand-alone or network computers to anyone in your building wearing an LRS alphanumeric pager. It's faster than cell phones and voice-mails, and it isn't disruptive or easily missed like overhead paging.

Page one person or entire groups. Let them know they have a phone call or one of 65 other pre-canned messages. No one has to miss an important message again.

NetPage Software

Simple to install and use. Each employee is issued an LRS pager. The transmitter is connected to the server running the NetPage software while each user runs the NetPage client on their computer.

To send a message: 1) Pull up the NetPage screen; 2) Click on a name; 3) Type in a message or use a stored message; and 4) Click "Send" and the message will be sent instantly and silently.

T74C232 Transmitter

Benefits

- Instant Communication - messages delivered immediately
- Increased Productivity - get more accomplished instead of searching for coworkers
- More descriptive messaging
- Maintain a professional atmosphere with silent messaging

Rechargeable Alphanumeric

Features

- Up to 1 mile range
